

■ AI Blog Automation — Complete Playbook

On-Demand & Scheduled AI Blog Post Creation for WordPress

Version: 1.0 · July 17, 2026 Part of: DigitalStudioz Project Toolkit

What This Is: The complete guide to building an AI agent that can write blog posts, generate matching images, upload everything to WordPress, and do it on demand or on a schedule — all for free using the tools you already have.

■ Recommended Approach: Easy MCP AI + Hermes

Why this wins: - Free. No paid plugins. - Hermes already has AI + image generation (FAL.ai) + MCP support - Natural language — just tell Hermes what you want - Works on both local dev and live Hostinger - Same stack you're already using for the Divi 5 build

Step-by-Step Setup

1. Install Easy MCP AI on WordPress

Plugin: [Easy MCP AI](#) — 4,000+ active installs, 5.0 rating, 242 tools, 100% free.

```
# Via WP Admin: Plugins → Add New → Search "Easy MCP AI" → Install → Activate
# OR via WP-CLI:
wp plugin install easy-mcp-ai --activate
```

2. Generate API Key

- WordPress Admin → Tools → Easy MCP
- Click "Generate API Key"
- Copy the MCP config snippet

3. Add to Hermes MCP Config

Add to your `.cursor/mcp.json` or Hermes MCP config:

```
{
  "mcpServers": {
    "wordpress-blog": {
      "url": "https://your-site.com/wp-json/easy-mcp/v1",
      "headers": {
        "X-API-Key": "your-generated-key"
      }
    }
  }
}
```

4. That's It — Start Posting

Usage: On-Demand Blog Posts

Basic Post

"Write a blog post about AI automation trends for 2026. Publish it to WordPress with category 'AI' and tags 'automation, 2026 trends'."

Post With Featured Image

"Write a blog post about the future of web design. Generate a featured image with FAL.ai showing a futuristic dark-mode website interface in Tactile Brutalism style (#121212, #00ffcc accents). Upload the image as featured media and create the post with SEO meta description."

Full Production Post

"Create a complete WordPress blog post about [topic]. - Title: SEO-optimized, under 60 characters - Content: 800-1200 words with H2 subheadings, bullet points - Featured image: Generate via FAL.ai at 1200×630px, matching the topic - Excerpt: 2-3 sentence compelling summary - Meta description: SEO-optimized, under 160 characters - Categories: [relevant categories] - Tags: 5-7 relevant tags - Schedule for: publish now / draft for review / schedule for [date]"

Usage: Scheduled Automation

Option A: Hermes Cron (Simplest)

```
# Set up a daily blog post cron in Hermes
hermes cron create \
  --name "Daily Blog Post" \
  --schedule "0 9 * * *" \
  --prompt "Write a WordPress blog post about a trending topic in web development or AI. Generate a FAL.ai featured image, upload both via Easy MCP to my WordPress site."
```

Option B: n8n Workflow (Most Powerful)

- Trigger:** Schedule node (e.g., every Monday at 8 AM)
- AI Agent node:** Generate blog post content + metadata
- HTTP Request → FAL.ai:** Generate featured image
- HTTP Request → WordPress REST API:** Upload image to media library
- WordPress node:** Create post with content + featured image + categories
- (Optional)* **Telegram/Slack node:** Notify you that a new draft is ready

Option C: Python Script + System Cron (DIY)

```
#!/usr/bin/env python3
"""Generate and post an AI blog article to WordPress."""
import requests, json, os

WP_URL = "https://your-site.com"
WP_USER = "your-username"
WP_PASS = "your-application-password"
FAL_KEY = os.environ["FAL_API_KEY"]

# 1. Generate content via your AI of choice (Hermes can drive this)
# 2. Generate image via FAL.ai
img_resp = requests.post(
    "https://fal.run/fal-ai/flux/dev",
    headers={"Authorization": f"Key {FAL_KEY}"},
    json={"prompt": "A professional blog header image about AI automation"}
)
image_url = img_resp.json()["images"][0]["url"]

# 3. Upload image to WordPress media library
img_data = requests.get(image_url).content
media_resp = requests.post(
    f"{WP_URL}/wp-json/wp/v2/media",
    headers={"Content-Disposition": "attachment; filename=featured.jpg"},
    data=img_data,
    auth=(WP_USER, WP_PASS)
)
media_id = media_resp.json()["id"]

# 4. Create post
post_data = {
    "title": "AI-Generated Blog Post Title",
    "content": "<!-- wp:paragraph --><p>Full blog content here...</p><!-- /wp:paragraph -->",
    "status": "draft", # or "publish"
    "categories": [5], # category IDs
    "tags": [12, 15], # tag IDs
    "featured_media": media_id,
    "excerpt": "Compelling excerpt...",
    "meta": {"_yoast_wpseo_metadesc": "SEO meta description..."}
}
post_resp = requests.post(
    f"{WP_URL}/wp-json/wp/v2/posts",
    json=post_data,
    auth=(WP_USER, WP_PASS)
)
print(f"Post created: {post_resp.json()['link']}")
```

Image Generation Specs

FAL.ai Prompt Template for Blog Headers

Professional blog header image for an article about [TOPIC].
Style: Modern, clean, dark mode aesthetic.
Background: #121212 with subtle geometric patterns.
Accent color: #00ffcc or warm amber glow.
Composition: Centered, plenty of negative space for text overlay.
Resolution: 1200×630px (optimized for social sharing).
No text in the image – text will be overlaid by the theme.

WordPress Image Sizes (Auto-Generated)

Size	Dimensions	Usage
Thumbnail	150×150	Archive listings
Medium	300×300	Blog grid
Large	1024×1024	Lightbox
Full	Original	Social sharing (1200×630)

WordPress REST API Quick Reference

Authentication

Create Application Password: WP Admin → Users → Edit User → Application Passwords
Use with Basic Auth: username:application_password

Endpoints

Create post
curl -X POST "https://site.com/wp-json/wp/v2/posts" \
-u "user:app-password" \
-H "Content-Type: application/json" \
-d '{"title":"Post Title","content":"Content","status":"draft"}'

Upload media
curl -X POST "https://site.com/wp-json/wp/v2/media" \
-u "user:app-password" \
-F "file=@image.jpg"

Get categories
curl "https://site.com/wp-json/wp/v2/categories"

Get tags
curl "https://site.com/wp-json/wp/v2/tags"

Free Tools vs Paid

Tool	Free	Paid	Verdict
Easy MCP AI	■ 242 tools	None	Use this
WP MCP Ultimate	■ 58 tools	None	Backup option
AI Engine	■ Core features	Pro for advanced	100K+ installs
n8n	■ Self-hosted	Cloud (\$20/mo)	For scheduling
WP REST API	■ Built-in	None	Most flexible
FAL.ai	■ Your existing credits	Pay-per-use	Already have it
WP 7.0 AI Client	■ In core	None	Foundation layer

Additional Standout Plugins (Client-Facing)

Plugin	Installs	Best Feature	Cost
AI Puffer	30,000+	Automation engine: scheduled tasks, voice agents, WooCommerce AI credits	Free + Pro
AI Bud	10,000+	Model fine-tuning + bulk title→content	Free + Pro
Dominopost	New	Full article structure: auto ToC, CTAs, key takeaways, keyword clustering	Free tier

Total cost to implement: \$0 — you already have all the pieces.

Quick-Start: Test It Now

```
# 1. Install Easy MCP AI on your LocalWP dev site
# 2. Generate API key
# 3. Tell Hermes:
"Connect to my WordPress site using Easy MCP at [URL] with key [KEY].
Write a test blog post titled 'Hello World – AI Edition' with a short paragraph
about AI-assisted blogging. Generate a simple featured image with FAL.ai.
Save as draft on my WordPress site."
```
